# PROJECT PHP

This is an explanatory document about the design of the application.

To begin with the main view will contain the title of the application which is "*Task Management*" and two images that will function as buttons, the image on the left (manager) will lead to the maintenance area of the manager and the image on the right (employee) will lead to the information page of the employee that has been selected.

The manager area will have two lists with different functionalities. The left list will be the task list and the right list will be the employee list, each list will have options to create, modify and delete. A task/employee will have to be selected for the buttons to do their functionality, if there is no item in the list selected the buttons will not work. The assign employee button will take the selected employee and assign him to the selected task. The view completed tasks button will show all the tasks that have already been completed. And the confirm assignments button can be pressed only when all tasks have assigned employees and will send an email to all employees who have a task.

| Create | Modify | Delete |

Each employee's page will have only one list containing the employee's assigned tasks. The close task button will close the selected task and the employee will be able to enter the hours that the employee has been performing the task.

Antonio`s area

Close task

The create task form will have four fields to fill in: the task name, the task description, the task type and the employee who will perform the task (optional). The create task button will automatically add the task to the pending list.
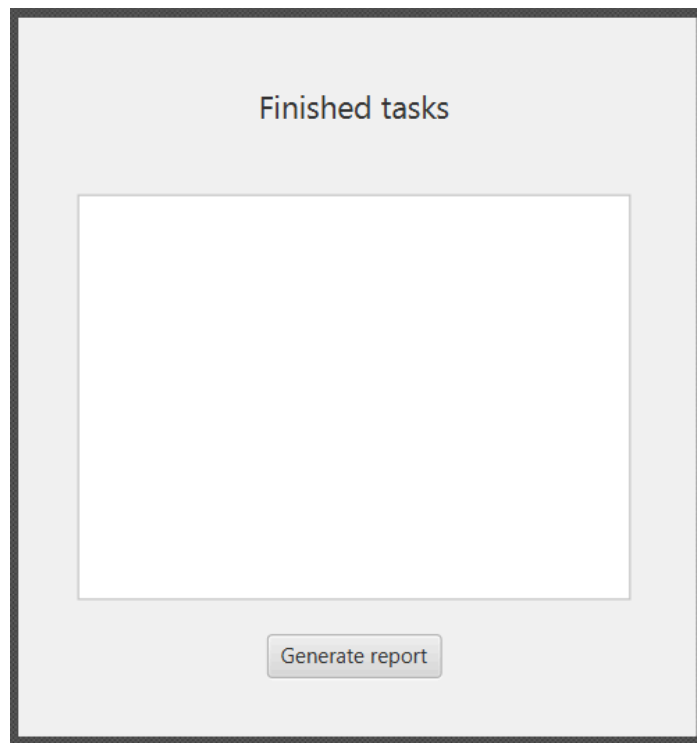

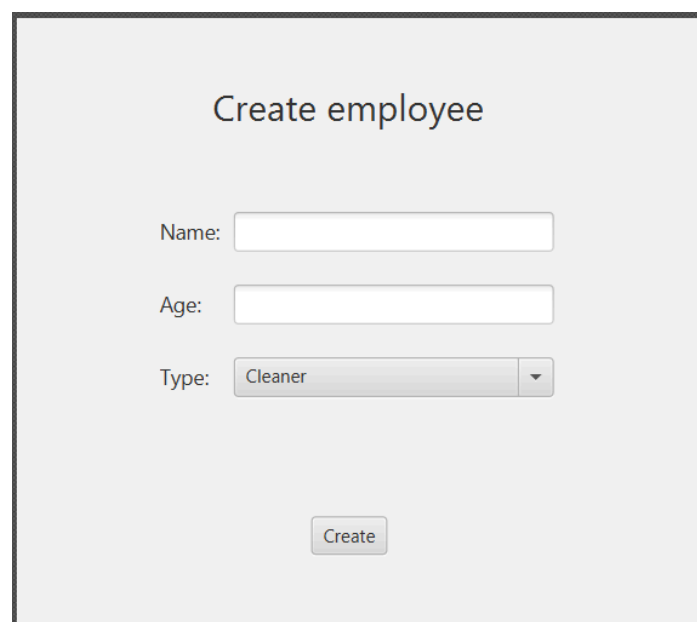

The finished tasks page will have a list of all finished tasks and a button that will generate a PDF containing a report of all completed tasks.

Finished tasks

Generate report

The create employee form will have three fields to fill in: the employee's name, age and the type of tasks the employee will perform.

Create employee

Name:

Age:

Type: Cleaner
